# **AGRICULTURAL ECONOMICS: ANNUAL REPORT OF THE EDITORS, JULY 2016**

## **EXECUTIVE SUMMARY**

This Annual Report covers the operations of *Agricultural Economics* from July 1st, 2015 through June 30th, 2016. Highlights include:

- The number of submitted manuscripts increased last year, with 545 new submissions and 166 resubmissions, for a total inflow of 777 manuscripts. This compares with 472 new submissions and 147 resubmissions in 2014-15.
- The number of papers ultimately accepted was 87 in the past year, almost the same as 88 in 2014-15. The one-year rejection rate (based on 440 rejections and 777 new, pending and resubmitted manuscripts) was 57% of all submissions, same as last year. About 26% of initial submissions were returned for revision (lower than the percentage of last year's 29%); some of those papers are eventually rejected and others are subsequently accepted. Based on 456 papers submitted or resubmitted, and 88 papers accepted, the annual acceptance rate stood at 11%, up slightly down 13% and 14% in the prior two years.
- Strong competition for acceptance in the journal requires that we turn away a large number of high-quality manuscripts in order to maintain reasonably quick throughput and a modest journal backlog.
- We called on a large number of referees during the year, receiving reports from a total of 432 reviewers representing 47 countries.
- The average speed of throughput remained similar to last year. A small number of papers remain in backlog with authors or referees and it remains an editorial goal to keep backlog to a minimum. In line with a shift that began in previous years, and a strategy discussed in past years with the IAAE executive committee, the editorial office continued to rely heavily on "desk rejections." Last year 50% of manuscripts were summarily rejected without being sent to reviewers. On average, summary rejections occurred 5 days after submission (virtually same, on average, as last year's 4 days and the previous year's 5 days), consistent with the management strategy of issuing such decisions within one week of submission. Rejections (after outside review) were rendered in an average of 113 days, two-weeks faster than last year's 127 days. Decisions to return manuscripts for revision were rendered in an average of 211 days (versus 174 days last year), and ultimate acceptances required a total of 395 days (up from 393 days last year).
- In June 2015 the ISI 2014 Impact Factors were released. The one-year Impact Factor for *Agricultural Economics* increased between 2014 and 2015, to 1.74, well above the last two years, of 1.09 and 1.19, respectively, and placing it 2<sup>nd</sup> on the list of 17 journals in the Agricultural Economics and Policy category. For 2015, the 5-year JCR impact factor for *Agricultural*

*Economics* was 1.70. In terms of overall citations, we ranked second with 2,021 total citations during the period.

- This is the first annual report presented by Awudu Abdulai and Ashok Mishra as Co-Editors-in-Chief. Jerry's tenure expired at the end of June 2015. Ashok Mishra joined Awudu at the beginning of July 2015 as co-editor
- Approximately half of the journal's Associate Editors were rotated off the journal last year, with the same number of replacements added.
- The 2015 "Best Paper" award, our eighth, goes to Federico Trindade and Lilyan Fulginiti for "Is there a slowdown in agricultural productivity growth in South American.?"

We are grateful for the opportunity to have served the IAAE as editors of the journal in the past year, and appreciate the continued support provided by the IAAE Executive Committee, our Associate Editors and the Advisory Board. On behalf of the journal and the association, we offer our sincere thanks to all of the authors and reviewers whose hard work resulted in another successful year for *Agricultural Economics*.

Awudu Abdulai  
Co-Editor-in-Chief

Ashok Mishra  
Co-Editor-in-Chief

# **AGRICULTURAL ECONOMICS: ANNUAL REPORT OF THE EDITORS, JULY 2015**

## **1. THE EDITORIAL TEAM**

The journals' editorial team for 2015-2016 is listed in Table 1. The Advisory Board consists of nine prominent leaders in our discipline, representing a wide range of fields and institutions. There was no change in the composition of the Editorial Advisory Board during the past year.

The Associate Editors are 18 distinguished colleagues, with specializations in particular regions, topics and methods. Approximately half of the journal's Associate Editors were rotated off the journal last year. The Associate Editors are of great help to the journal since they agree to serve as "super reviewers" or to coordinate the review process.

We do not currently have a book review editor and have not made plans to add one.

## **2. MANUSCRIPT SUBMISSIONS AND THE REVIEW PROCESS**

Between July 1st, 2015 and June 30th, 2016, we handled 777 manuscripts, and increase of 9 percent over the previous year. We received 545 new manuscripts, up from 472 in 2014-2015, 423 in 2013-2014, and 377 in 2012-2013. In addition, 66 manuscripts had action pending from the previous year, and 166 manuscripts were received in revised form (up from 147 last year. This resulted in a total of 777 manuscripts handled during the year (up 85 from 2014-15). The journal continues to handle an average of about 2.8 manuscripts per working day and to maintain rapid throughput. The co-Editors divide this workload somewhat evenly.

Table 2 provides a detailed breakdown of the manuscript flow under the current manuscript-management system. Of all the manuscripts handled during this year, 11% were accepted, roughly 18% were returned for revision, and 12% are still with referees or authors. Among completed decisions, the rejection rate is 62%. Of these rejections, 39% of all submissions were summarily rejected (i.e. "desk rejected") on first reading by the Editor, and 19% of papers were rejected after outside referee reports were obtained. The fraction of new submissions that were summarily rejected (without review) was 305 out of 545 new submissions (56%). The journal continues to attract a very large number of papers from authors who aspire to publish in an internationally-recognized journal but whose work is not yet ready for publication in *AE*. The goal in issuing "desk rejections" is simply to avoid unnecessary delays for authors and reduce burdens on reviewers and Associate Editors when manuscripts are clearly unsuitable for review or do not fit the aims and scope of the journal.

Table 3 provides cumulative information on 1,440 submissions received between July 2013 and June 2016, relative to the 1032 manuscripts received during the previous six-year (2010-13) editorial window. Our rejection rate among completed decisions is now 88%, higher than the earlier rate (83%); the overall acceptance rate has slightly decreased from 19% to 16% of decisions rendered. About 7% of all manuscripts submitted to us still have action pending by either

the authors or referees. Roughly a quarter of new submissions are returned for revision. Some of those are eventually rejected or withdrawn if authors are unable to make the required improvements. In general, we have maintained a roughly similar acceptance rate to the historical rate with a substantially higher number of admissions by aiming for shorter published papers and sometimes using the supplementary issue to publish papers from the regular pool of submissions. In the past year it was necessary to remove from consideration 5 manuscripts that had been idle with authors for more than 365 days following a revise and resubmit decision.

Table 4 breaks down the submitted manuscripts by country of origin. The single largest source of papers continues to be the U.S., from which about one fourth of all manuscripts were submitted in the most recent year.<sup>1</sup> Large fractions come from India, Australia, Germany, Iran und France, each of which accounted for 4-10% of submissions. China's share continues to rise and was 11.35% in 2015-16.

Table 5 provides information on manuscript processing speed, i.e. the length of the review process. Average decision times were roughly in line with past years. Summary rejections (rendered without outside reviews) were returned in an average of 5 days after submission (a bit slower than last year's 4 days). Rejections after outside reviews were rendered in an average of 113 days (roughly two weeks faster than last year). Decisions to return manuscripts for revision were rendered in an average of 211. Ultimate acceptances required a total of 395 days (up substantially from 393 days last year).

One important source of drag in throughput is the backlog of papers that remain with authors and the substantial impact of several "outlier" acceptances after very long gestation periods. Overall, the current metrics are somewhat in line with data from previous years. An attempt is made to close the file on papers that have lingered for more than 365 days although, in practice, an author who asks for an extension is usually granted one.

Table 6 contains a list of all referees whose reviews were received between July 1, 2015 and June 30, 2016. We called on a large number of referees, receiving reports from a total of 476 reviewers (a slightly larger pool than last year's 415 referees). This pool represents a total of 47 countries, roughly in line with the past. On behalf of the authors and readers of *Agricultural Economics*, we are very grateful to our colleagues for their otherwise anonymous contributions to our discipline.

### **3. SPECIAL ISSUES "BLUE BOOK"**

A substantial fraction of the journal is devoted to special issues of various kinds, the content of which merits particular attention. We publish six issues per year, plus an annual supplement.

After each triennial conference of the IAAE, the supplement is used for plenary papers and other conference proceedings. These had previously been published separately as the IAAE's Blue Book. Post-conference years previously used two of

---

<sup>1</sup> Although the pool of submissions during this period cannot be directly compared to the pool of acceptances during the same period, roughly half of all papers accepted had a corresponding author with a US affiliation and 12% were from Germany.

the six regular issues for a double issue of contributed papers from the conference. However, this time around, we did not make any provisions for contributed papers and organized symposia from the 2015 conference in Milan. We encouraged the authors of these papers to submit their manuscripts as regular papers that go through the journal's normal review process.

In 2014 and 2015 the Volume 45 and Volume 46 supplements were used to publish regular submissions that were in the publication pipeline, thereby increasing journal throughput.

The 2015 conference proceedings issue is being guest edited by Will Martin and contains the plenary session papers from the IAAE Milan conference.

#### **4. THE BEST PAPER AWARD**

The first annual award for the best paper published in *Agricultural Economics* was introduced in 2008. The first such prize was awarded at the IAAE meetings in Beijing to David Stifel and Bart Minten for their article "Isolation and Agricultural Productivity." The best paper selected from 2013, our sixth "Best Paper" award, was "Capturing zero-trade values in gravity equations of trade: an analysis of protectionism in agro-food sectors" by Philippidis, Helena Resano-Ezcaray and Ana Sanjuan-Lopez. Plaques were generously provided by Wiley-Blackwell and presented to the authors. The best paper selected from 2014, our seventh "Best Paper" is "Did The Commodity Price Spike Increase Rural Poverty? Evidence from a Long-Run Panel in Bangladesh" by Joseph V. Balagtas, Humnath Bhandari, Ellanie R. Cabrera, Samarendu Mohanty and Mahabub Hossain. Plaques were presented to the authors in August 2015 at the IAAE conference in Milan. The best paper selected from 2015, our eighth, was "Is there a slowdown in agricultural productivity growth in South America? by Federico Trindade and Lilyan Fulginiti. Plaques were presented to the authors in August 2016 at the AAEA conference in Boston.

#### **5. JOURNAL PUBLICATION AND MARKETING**

In 2016 the IAAE concluded a successful negotiation for a new Wiley-Blackwell contract. Given our positive recent history with Wiley-Blackwell, we believe this renewal serves the journal well. Thus far, Wiley-Blackwell has provided excellent service in terms of both production and marketing. Blackwell's merger with Wiley was handled well, with a smooth transition of the production office to Singapore. The marketing staff remains in Massachusetts. A new Production Editor was assigned to the journal in the past year. Communication with the publisher remains smooth.

#### **6. CITATIONS AND IMPACT**

Articles in *Agricultural Economics* continue to be widely cited, and in 2015 our journal was listed as the third most highly cited journal among the seventeen listed in the category Agricultural Economics and Policy. We received a total of 2,021 citations. In recent years, with the move to make more of our articles available "online-early" we have seen a tendency for citations to appear more rapidly following publication. A key to increasing our citation rates has been to make more papers available through this channel. The JCR 2015 Impact Factors were released

in June 2016. The one-year Impact Factor for *Agricultural Economics* increased between 2014 and 2015, to 1.74, well above the 1.19 in 2014 and 1.08 in 2013. As is evident from Table 8, the journal ranked second among the 17 field journals in Agricultural Economics and Policy category. For 2015, the 5-year JCR impact factor for *Agricultural Economics* was 1.70 (up from 1.49 in the previous year), placing it 6<sup>th</sup> on the list of 17 journals in the Agricultural Economics and Policy category. Table 7 lists the 10 most frequently cited *Agricultural Economics*.

## **7. CONCLUSIONS**

This annual report would not be complete without conveying our sincere thanks to the IAAE Executive Committee for their support and advice, to the journal's Associate Editors and Advisory Board for their guidance, and most of all to the authors and reviewers whose hard work is visible every day in the pages of *Agricultural Economics*. We appreciate the opportunity to have served the Association in the past year as Editors.

## **TABLE 1: EDITORIAL TEAM FOR *AGRICULTURAL ECONOMICS*, 2015- 2016**

### **Co-Editors**

Awudu Abdulai, University of Kiel, Germany (2012-2016)

Ashok Mishra, Arizona State University (2015-2016)

### **Advisory Board**

Jikun Huang, Chinese Academy of Sciences, China

Wallace Huffman, Iowa State University, USA

Uma Lele, Independent Researcher, USA

Peter Matlon, Rockefeller Foundation (retired), USA

Willis Oluoch-Kosura, CMAAE, Kenya

Kei Otsuka, GRIPS, Japan

Prahbu Pingali, Cornell University, USA

Martin Ravallion, Georgetown University, USA

Peter Warr, Australia National University, Australia

### **Associate Editors**

Sven Anders, University of Alberta, Canada

Ekin Birol, IFPRI, USA

Hung-Hao Chang, National Taiwan University, Taiwan

José M. Gil, Research Centre for Agri-Food Economy & Development, Spain

Renan Goetz, University of Girona, Spain

Sergio Gomize y Paloma, JRC-IPTS, European Commission, Spain

Steven Helfland, University of California-Riverside, USA

Arne Henningsen, University of Copenhagen, Denmark

NOTE: †*Country* is typically identified based on the reviewer's mailing address at the time of article review. Reviewers affiliated with international institutions (e.g. FAO, The World Bank, IFPRI) are labeled according to the location of that institution.

**TABLE 7: THE 10 MOST FREQUENTLY CITED ARTICLES IN *AGRICULTURAL ECONOMICS***

Rank	Authors	Title	Year	Vol.	Issue	Cites
1	Anselin	Under the hood: issues in the specification and interpretation of spatial regression models	2002	27	3	331
2	Berger	Agent-based spatial models applied to agriculture: a simulation tool for technology diffusion, resource use changes and policy analysis	2000	25	2-3	205
3	Headey and Fan	Anatomy of a crisis: the causes and consequences of surging food prices	2008	39	3	129
4	Battese	Frontier production functions and technical efficiency: A survey of empirical applications in agricultural economics	1992	7	3-4	126
5	Adesina and Zinnah	Technology characteristics, farmers' perceptions and adoption decisions: A Tobit model application in Sierra Leone	1993	9	4	124
6	Ivanic and Martin	Implications of higher global food prices for poverty in low-income countries	2008	39	3	117
7	Rosegrant, Ringler, McKinney, et al.	Integrated economic-hydrologic water modeling at the basin scale: the Maipo river basin	2000	24	1	113
8	Adesina and Baiduforson	Farmers' perceptions and adoption of new agricultural technology: evidence from analysis in Burkina Faso and Guinea, West Africa	1995	13	1	111
9	Shiferaw and Holden	Resource degradation and adoption of land conservation technologies in the Ethiopian Highlands: A case study in Andit Tid, North Shewa	1998	18	3	110
10	Pannell	Sensitivity analysis of normative economic models: theoretical framework and practical strategies	1997	16	2	107
